## CRaTER
### Stress Corrosion Evaluation

Dwg. No. 32-04006

Revision 01

March 17, 2006
Stress Corrosion Evaluation

The CRaTER Instrument structure is machined from a monolithic block of Aluminum, 7075-T651. This material is not subject to stress corrosion cracking. There are no weldments and no weld filler alloys.

The CRaTER Instrument does not require a Stress Corrosion Evaluation Form.
