## Results:

Per test procedure preformed
- Initial 0C baseline
- +40C Hot soak/turn on/Long Form functional
- -40C Cold soak/turn on/Long Form functional
- 7 more +40/-40C cycles with instrument always on
- Final 0C baseline

Instrument was stable except for upward shift in noise on detectors D2 and D6. As final noise was still within acceptable limits and remained stable at the end, this is considered an acceptable “aging” process.

## S/N: 2  Passed/Failed: Passed
