NOTES:

1) Reference designations "WP" are wire pads.
2) Pigtails with lugs from WP17 and WP18 connect to the chassis plate assembly.
3) This is a NEGATIVE voltage module:
   - Component "C3" is to be installed in the "R2" position on the board
   - Component "R2", 0.0 ohms, is the secondary ground to chassis connection.
   - WP15 and WP16 are NOT to be used to daisy-chain secondary ground between modules.
4) This schematic is common to both negative voltage Modules. See the chart below for the Module Ref. Designation and DC-DC Converter P/N.
5) R1, R3, C5 and C6 shown for reference only - DO NOT INSTALL.
