NOTE: External Reset reuses the +12V pin of the PC104 connector. It is jumped to the push-button reset on the CPU card.

Place one 10uF cap next to DB9 connector, and one on other side board.

NOTE: Power, received on this board (5V), is routed to the Motherboard via the PC-104 connector.
Jump spare inputs to ground on component side, with a set of vias (so that etch can later be cut/jumped.
