

ACIS Verification Summary Report

Specification:	ACIS Contract End Item Specification
Requirement Number/Title:	3.7.4.4 Power Isolation (VRSD 3.7.4.4-2)
Requirement Statement: When secondary (transformer isolated) power is generated within the SI, each secondary power return shall be grounded to structure as close to the source as possible.	
Verification Method:	
Procedure Number:	
Configuration:	
Cycle Time:	
Verification Discussion/Results:	
<p>All secondary power is connected to structure within the EMI cavity of the PSMC. This is the closest available point within the PSMC. ACIS system level thermal vacuum testing and EMI testing have verified that this connection is adequate to satisfy system performance requirements.</p>
