# **CRaTER Materials Identification And Usage List (MIUL)**

Dwg. No. 32-04001

Revision A

June 7, 2006

The CRaTER Materials Identification and Usage List (MIUL) includes the As-Built Materials List, Polymeric Materials List, Inorganic Materials List, Lubrication Usage List, and Materials Process Utilization List. These inclusions satisfy the five (5) Data Items numbered 35, 38, 40, 42, and 44, respectively. Note that there are no mechanisms in CRaTER and no Lubricants.

The design of the CRaTER Instrument is not finalized at this time. Therefore, the materials listed in this revision of the MIUL are, in part, materials typically used on a space flight instrument. As the design matures, the fidelity of the MIUL will grow to represent the As-Built Materials List.

MIUL Data is presented as a list in an Excel format and is included as a daughter document, drawing number 32-04001.01
